ABOUT

Daniel is a BIM Consultant at Symetri. Prior to this, he worked in Architectural Practices on projects in a variety of sectors including High Rise, Office/ Commercial, Light Industrial, Marine Transport, Higher Education and Schools. In 2021 he switched from Architectural practice to become a full time BIM Consultant.

Daniel has an expansive role at Symetri. He delivers consulting and training in BIM and Information Management, in particular, the international standard ISO 19650 and its related systems and procedures. He has worked with a range of clients on this from Tier 1 Contractors and Local Authorities to Architects, MEPH specialists and Structural Engineers.

Daniel is also a part of the Co-Innovation Practice, Symetris' R&D Division, working on technical solutions for decarbonisation. Daniel is able to leverage industry leading tools like One Click LCA as well as Symetris' proprietary technology to perform building life cycle analyses.

The decisions we make regarding our built environment have far-reaching implications and our ability to make those decisions depends on our ability to handle, visualize, and extract relevant insights from the information at our disposal. As technology and data analytics continue to advance, our potential to shape a more sustainable, safe, and livable built environment becomes more and more reliant on our information management and interpretation capabilities.
